

## Talking with Your Doctor

It's important to discuss adhesions and their complications with your doctor before you have open abdominal or pelvic surgery. Here are some questions you may want to ask:

1. What is the likelihood that I will form adhesions following this surgery?
2. What methods will be taken to minimize adhesion formation in my surgery? Will you use SEPRAFILM® Adhesion Barrier?
3. What symptoms should I be aware of that could indicate complications due to adhesions?

Seprafilm® Adhesion Barrier is used to reduce internal scarring (adhesions) after open surgery in the abdomen or pelvis. Side effects are consistent with those typically seen following surgery when used as directed. Seprafilm should not be wrapped around a reconnected bowel as this may lead to increased side effects. Please see the Seprafilm Package Insert for full product information and talk to your doctor.
